- Masking tape protecting the magnetic band

Easy installation

- Simple glued assembly of the magnetic band
- Large mounting tolerances
- Warning signals via LED if the magnetic field is too weak

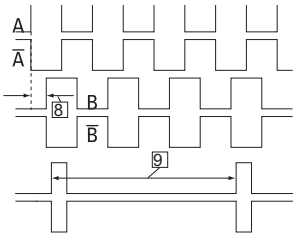
Signal figures

9 Periodic index signal (every 2 mm); the logical assignment A, B and I-Signal can change

8 Pulse edge interval: Pay attention to the instructions in the technical data



1) If supply voltage correctly applied
2) Only one channel allowed to be shorted-out
   If U_B = 5 V, short-circuit to channel, 0 V, or +U_B is permitted
   If U_B = 5 ... 30 V, short-circuit to channel or 0 V is permitted
3) At the listed rotational speed the min. pulse edge interval is 1 µs, this corresponds to 250 kHz. For the max. rotational speed range a counter with a count input frequency of not less then 250 kHz should be provided.
