

Large format LED display for counting system CODIX 560 of "Fritz Kübler GmbH"

Maintenance free LED slave display
with serial interface
RS232 or RS485,
data protocol CRLF

© WE.TEC/Kübler, example 3-digits

While with central control stations usually all information are displayed directly, process-related data have to be made available from major distances to a high number of persons. Our intelligent large-format-displays are the optimum solution to visualize this information. All data of the "Kübler counters" are readable from high distance by our large LED displays at any time. Because of the modular concept of our large displays, customized requirements in hard- and software can be considered without any problems at any time.

TECHNICAL DATA	
Installation	indoor or outdoor
Display variants	single side readable or double side readable
Number of lines	1 line
Number of digits	6 digits
