Our pulses for innovations

The Kübler Group is one of the world's leading manufacturers and specialists for encoders and sensors to measure position, motion, and inclination, as well as slip rings for transmitting power, signals, and data.

The portfolio of premium products is rounded off by counters, process devices, and reliable speed monitors to record and evaluate various measured variables.

Founded in the year 1960 by Fritz Kübler, the family business is now led by the next generation of Gebhard and Lothar Kübler.

Innovative product and sector solutions, as well as solutions for functional safety and a high level of service, are the reasons behind our global success.

The strict focus on quality ensures the highest levels of reliability and a long service life for our products in the field.

Twelve international group members and distributors in more than 50 countries offer local product know-how, service and advice throughout the world.

Over 600 dedicated people worldwide make this success possible and ensure that customers can continue to place their trust in our company.

Product portfolio – Made in Germany

MEASUREMENT

- Encoders – incremental and absolute
- Bearingless encoders
- Motor Feedback Systems
- Radar sensors
- Draw-wire encoders
- Measuring wheel systems
- Magnetic length measuring systems
- Optical length measuring systems / Shaft copying systems
- Inclinometers
- Condition Monitoring Sensor

TRANSMISSION

- Slip rings
- Slip rings, customized solutions
- I/O Modules
- Signal converters and optical fiber modules
- Cables and connectors

EVALUATION

- Displays and counters
- Process devices
- Safe speed monitors up to SIL3/PLe
- Signal lights and signal towers

We offer solutions for the following industries:

DRIVE TECHNOLOGY

ELEVATOR TECHNOLOGY

MOBILE AUTOMATION

HEAVY INDUSTRY

WIND TURBINES

SOLAR INDUSTRY

PACKAGING INDUSTRY

BOTTLING PLANTS

The high performance level and reliability of the Kübler products are based on our long experience in these demanding application sectors. Learn more about our application-specific solutions under:

kuebler.com/industries

MEASUREMENT

ENCODERS

BEARINGLESS ENCODERS

MOTOR FEEDBACK SYSTEMS
FOR SERVO MOTORS

Rotary speed and position detection, linear position, speed and vibration measurement, object detection and detection of inclination angles.

Whether encoders, bearingless encoders, motor feedback systems, linear measuring technology, Condition Monitoring sensors, shaft copying systems and inclinometers, choose the optimum solution for your application from a range of sizes and numerous ordering options. You too can design your systems, machines or motors with Kübler.

Your application is our focus: modifications and special solutions are therefore implemented flexibly and quickly for you.

kuebler.com/measurement

LINEAR MEASURING SYSTEMS

INCLINOMETERS
CONDITION MONITORING SENSORS

Encoders

Speed measurement and position detection using incremental and absolute encoders.

Choose the perfect encoder for your application from a variety of sizes and ordering options. The Sendix encoder – made in Germany – is the result of the highest quality awareness and careful selection of materials. It has proved its value in many industries as a robust and precise sensor technology. Design your plants, machines, or motors with Kübler. Your application is our priority: Your modifications and special solutions are implemented flexibly and quickly. We look forward to your challenge.

kuebler.com/encoders

New generation of Kübler Sendix encoders

Equipped with state-of-the-art technology, the new Kübler Sendix K58I and K80I (for large hollow shafts) encoders impress with their high performance, flexibility and future-proofing. The Sendix K58I Performance encoder is available as an individually programmable variant.

⊕ Configurable parameters include the following:

- Number of pulses up to 36.000 ppr
- HTL or TTL output
- Counting direction
- Zero pulse (length, position, links)

Find the right Kübler accessories

Cables, connectors and pre-assembled cordsets

Fixing components for hollow shaft encoders: spring element, torque stop, stator coupling, tether arm, isolation insert

Fixing components for shaft encoders: flange, robust bearing unit, bearing box

Connection of motor and encoder: coupling, flexible shaft coupling

SSI displays, safe speed monitors

Programming unit for Sendix K58I-PR

Enter order code of your encoder and find accessories:

Bearingless encoders

Reliable speed measuring with magnetic sensor solution.

Bearingless encoders are the perfect alternative to bearing mounted encoders, due to their compact design and easy mounting options on almost any shaft diameter. Bearingless encoders from Kübler are already used today in drive and elevator technology, for asynchronous motors or external rotor motors, or in generators, large motors, and wind turbines.

Our smart technology is available for the highest signal quality. Digital real-time signal processing compensates for possible signal errors and optimizes drive control.

Do you need a magnetic bearingless encoder for 100% integration into the motor with customized design of the size and connection technology? We have the solution - contact us.

Motor Feedback Systems for servo motors

A constant dimension of 36.5 mm means enormous benefits for you.

With requirements from industry and many years of experience in drive technology, Kübler presents its new product family of Motor Feedback Systems. Kübler has developed its Motor Feedback Systems in close cooperation with prominent manufacturers of servo motors and converters. They are based on a unique platform that offers a multitude of possibilities and benefits for servo motors. From the reduction in number of motor variants and the standardization of the mechanical connection between encoder and drive to cost savings along the entire value chain. You also get maximum flexibility when selecting the electrical interfaces.

Radar sensors

Industrial radar sensors based on the latest radar technology.

Whether sensor or sensor system solution, Kübler offers a wide range of options for the most diverse measuring tasks in the most diverse applications from all industrial sectors. With a measuring rate of up to 500 Hz and accuracies of up to $\pm 1\mu\text{m}$, measurement is not only fast but also with unprecedented precision; a small blind range of just 0.15 m for use at close range of the sensor is an outstanding feature, as is the very narrow aperture angle of just $\pm 1.5^\circ$ for very precise and focused measurement. Suitable accessories and software tools ensure user-friendly installation and configuration.

Draw-wire encoders

Linear measuring system for position detection.

The right draw-wire encoder for every application. From precise to compact to robust and cost-optimized. Kübler offers a comprehensive portfolio based on different measuring lengths. In addition to all common interfaces, innovative features such as integrated inclinometers or redundant sensors make the difference. From analog to fieldbus – draw-wire mechanisms can be combined with a wide variety of Sendix encoders according to customer requirements. That's why we offer countless ordering options and are ready to realize modifications and special solutions for you.

Measuring wheel systems

Systems for speed measurement, position detection and length measurement.

Measuring wheel systems from Kübler are the ideal solution for reliable speed measurement, position detection and length measurement in applications with linear movements. These are recorded rotationally via the measuring wheel with attached encoder directly on the surface of the material to be measured and converted into linear data. Integrated springs ensure the necessary contact force of the measuring wheel on the measuring surface for reliable measured value acquisition.

Magnetic length measuring systems

Efficient, non-contact position measurement in industrial applications.

In a linear magnetic measuring system, the sensor system, also known as a scanning head or sensor, is guided contactlessly over a coded magnetic tape. You can choose between incremental and absolute sensors. The measuring system is insensitive to dust, chips and moisture and is resistant to many liquids and oils. Various interfaces are available for the respective applications.

Shaft copying systems

Absolute positioning of the elevator car for travel heights up to 392 m.

The contactless absolute measuring system for shaft copying – also called shaft information or positioning system – has an extremely compact, very robust design. In addition to the sensor, which detects the position of the elevator car 100 % slip-free, it also includes the appropriate evaluation unit, a so-called Position Supervisor Unit (PSU). The safe system therefore consists of a SIL3-certified sensor and a suitable evaluation unit. This enables elevator and safety functions to be implemented in accordance with EN 81-20/21/50.

kuebler.com/shaft-copying-systems

Easy installation - Ants shaft copying systems.

Installed in the elevator shaft in just a few steps.
Your benefits - cost and time savings over the entire length.

Inclinometers

Precise and reliable measuring – even in harsh environments.

The right solution for every application. Whether static or dynamic applications, Kübler offers the right sensor technology for both 1-axis and 2-axis inclination measurement. Compared to alternative measuring systems, inclinometers offer more flexibility and degrees of freedom in system design, as the sensor does not require a mechanical connection to a shaft or rotary axis. The advantage: simple installation and fewer sources of error. The sensors can be individually adapted to the respective application using simple tools.

1) IO-Link communication for parameterization via FDT/IODD with corresponding software (e.g. PACTware).

Condition Monitoring Sensor

Vibration and temperature sensor with IO-Link interface: detect and analyze vibrations.

The CMSVT38 condition monitoring sensor reliably records information about vibrations / oscillations in 3 axes as well as temperatures. The measurement data is exchanged with the controller for processing via an IO-Link interface.

The CMSVT38 can be integrated into various condition monitoring concepts. In addition to condition monitoring, the sensors can also be used to record process steps.

CMSVT38 in combination with signal light and Y-distributor as a stand-alone solution for condition monitoring.

As an alternative to connection to a controller, two PNP/NPN switching outputs can be used individually in SIO mode and parameterized via IO-Link communication. The CMSVT38 vibration sensor detects vibrations and transmits 2 switching signals for predefined limit values. The switching outputs can be connected directly to signal lights via the IO-Link Y-distributor, which also supplies the system with power. At the same time, the switching signals are also transmitted for further processing. For example, switches, motors or valves can be activated in addition to the visualization.

TRANSMISSION

SLIP RINGS

I/O MODULES

With Kübler you can always reliably transmit power, signals, and data.

The increasing degree of automation and the increasing networked communication demand trouble-free and reliable transmission.

Kübler offers high-quality slip rings that transmit power, signals, data, and other media from stationary to rotating platforms. Complete data networks can be set up with the I/O modules and the extensive range of cables and connectors. A broad portfolio of signal converters rounds off this range. Find the right solution for your application.

Slip rings

Slip ring platform with Gigabit transmission.

Due to the increasing networking of all components of a plant / machine and the associated complexity of machine controllers through to the implementation of Industry 4.0 / IIoT concepts such as Condition Monitoring, the demand for high-end data transmission is increasing. Following this trend, Kübler has developed a new, future-proof slip ring platform, which on the one hand is equipped with reliable „high-end“ transmission technology in a maximum compact design and on the other hand has a 1 Gbit module. This operates without further electronic components and thus enables interference-free, reliable and direct transmission.

Industrie 4.0 / IIoT ready

The intelligent networking of all components is based on the use of smart sensors. Smart Kübler slip rings with integrated sensors are understood to be industry 4.0 enablers. Thanks to condition monitoring and the predictive maintenance associated with this, for example, they ensure greater system availability.

Find out more at:
kuebler.com/iiot

In addition to the transmission of electrical currents as well as pneumatic and hydraulic, other functions for speed, position, vibration or temperature monitoring can be integrated into the slip ring concept. Such as Kübler incremental and absolute encoders or bearingless encoders.

IO-Link master modules

Intelligent fieldbus-independent communication.

Discover the IO-Link master modules from Kübler and optimize your automation with state-of-the-art technology. The IO-Link master modules from Kübler reliably establish the connection between all IO-Link devices (sensors and actuators) and the higher-level controller (e.g. PLC). The bidirectional communication with the connected IO-Link devices enables parameters to be read and written. With reliable data transmission. In addition, the Kübler IO-Link Master Module collects diagnostic information from the devices and forwards it to the control system, which enables errors to be detected and rectified at an early stage. All in the spirit of condition monitoring and predictive maintenance.

Signal converters and optical fiber modules

Error-free and reliable signal transmission.

Signal converters in various models and fiber optic modules enable reliable communication – with a wide variety of interfaces – between controllers and sensors. In addition to encoders, linear sensors, and inclinometers from Kübler, these products are a suitable addition to the overall range of sensors. Take advantage of the new possibilities for a comprehensive overall concept from a single source.

Cables and connectors

The right connection technology for every application.

Cables and connectors play a decisive role in the reliable operation of your systems, machines, or motors. High-quality and adaptable – this is what Kübler cables and connectors stand for. A comprehensive product range is available for selection, from cables as unassembled yard ware and self-assembly connectors such as M8, M12, M23, MIL, Sub-D or RJ45, through to pre-assembled cable sets such as printed circuit board connectors.

PROCESS DEVICES

Display, control, monitor and count – accurately and reliably with Kübler.

Kübler is known worldwide in the field of counting technology. Our electromechanical, electronic and pneumatic indicators and counters have proven themselves in many industries. Electronic process devices for recording, controlling and monitoring processes round off this product diversity. Our signal lights and signal towers are used for optimum visualization of system statuses directly on site. We offer compact speed monitors for functional safety. Regardless of which product you choose, each one is manufactured with the highest quality awareness and precision.

Process devices

The right solution for any conceivable application.

Discover the variety of electronic process devices from Kübler. These are used reliably worldwide in various applications for the acquisition and control of standard signals, measured temperature values, or the monitoring of measured pressure and weight values. Maximum flexibility: scalable or linear display, multicolor, or modern touch displays are available for you. Kübler process devices stand for highest quality, optimum readability, and long service life.

You, too, can count with us – count on Kübler.

Safe speed monitors

Reliable and safe speed monitoring.

The compact base module of the Safety-M compact series is a complete speed monitor in the smallest possible space (50 mm wide). The detachable operating and diagnostic display (OLED) stands for simple parameterization. The safe inputs/outputs and integrated signal splitter allow integration into existing safety circuits and upgrade of old machines.

kuebler.com/safe-speed-monitors

SIL2
Functional Safety
PLd

SIL3
Functional Safety
PLe

Reliable individual components alone do not lead to a reliable overall application.

A reliable speed monitor and the corresponding reliable sensor technology are required for a reliable connection from the motor to the control unit. Kübler offers SIL2 and SIL3 certified encoders for both incremental and absolute measurements (see page 10+13).

Signal lights and signal towers

Designing industrial processes safely. Increase plant availability.

In industry, where every minute counts, reliable signaling is essential. Illuminated signs, light signal towers, traffic lights and audible alarms are crucial for the safety of employees and the availability of systems. They ensure clear communication and enable quick reactions to changing operating conditions. This minimizes downtimes, increases productivity and contributes to sustainable production. Rely on these technologies to ensure smooth operation, increase employee satisfaction and optimize efficiency in your company.
