Sensor – Ants Base	LEB02	Absolute position detection
---------------------------	--------------	------------------------------------

Ants LEB02 is an extremely robust, compact and contactless measuring system. It uses a contactless measuring principle to measure without any slipping absolute elevator car positions with a resolution of 1 mm and a travel speed of 8 m/s. Additional components such as magnetic switches become superfluous.

Especially the easy assembly reduces installation time, thus contributing to overall costs reduction.

Features and benefits

- Precise position feedback**
 The sensor system provides absolute position values. No homing necessary after power failure.
- 100 % slip-free**
 Mounting on, next to or underneath the lift car always provides direct position feedback without the effect of possible slippage of the suspension means.
- Conveyor heights up to 392 m**
 With a resolution of 1 mm, a travel speed of up to 8 m/s and a maximum code band length of 392 m the measuring system can also be used for high-rise installations.
- Maximum compactness**
 With its compactness, the sensor is not only easy to install, but can also be integrated into the tightest installation spaces. Even in glass lifts, it blends in very well with the overall appearance of the lift system.

Functional principle LEB02

The Ants LEB02 sensor consists of a detection system (SCAN). Positions and speeds are detected without slippage and transmitted to a controller via CANOpen Lift, SSI or RS485.
