

Measuring wheel system

Performance-Line

Measuring wheel system MWE61

With spring arm, contact force max. 40 N

With incremental or absolute encoder with clamping flange $\varnothing 58$ mm.

Measuring wheel systems from Kübler are the ideal solution for reliable speed measurement, position detection and length measurement in applications with linear movements. These are recorded rotationally via the measuring wheel with attached encoder directly on the surface of the material to be measured and converted into linear data.

The robust MWE61 measuring wheel system offers maximum spring deflection at maximum contact force to compensate for tolerances vertical to the transport movement of the material to be measured.

Features

- Robust design**
 With flexible mounting options: vertical, horizontal or overhead. Encoder can be mounted on the spring arm in 120° steps.
- Wide range of encoders**
 Incremental Sendix encoders with a max. resolution of up to 36,000 pulses/revolution as well as absolute encoders for different communication interfaces such as IO-Link or Profinet for integration in Industry 4.0 concepts.
- Suitable measuring wheels for all measuring surfaces**
 Circumferences 300 mm or 12" – measuring wheel coating available with O-ring or double O-Ring, smooth or corrugated plastic, diamond knurl surface and tufted rubber.
- Contact force up to max. 40 N**
 With stepless adjustable preload. To compensate for tolerances, the integrated spring ensures a working range of the measuring wheel up to a maximum of 80 mm vertical to the measuring surface.

Construction

- 1 Spring arm:** MWE60
- 2 Encoder:** Clamping flange $\varnothing 58$ mm
- 3 Measuring wheel:** Circumference 300 mm or 12" (Circumference 200 mm or 500 mm on request)

Calculation of the linear resolution

	Measuring step (distance/pulse)	Resolution (pulses/distance)
Calculation	$\frac{\text{distance}}{\text{ppr}} = \frac{\text{Measuring wheel circumference}}{\text{Pulse number encoder}}$	$\frac{\text{ppr}}{\text{distance}} = \frac{\text{Pulse number encoder}}{\text{Measuring wheel circumference}}$
Example 1 Measuring wheel circumference = 300 mm Pulse number encoder = 3000 ppr	$\frac{300 \text{ mm}}{3000 \text{ ppr}} = 0.1 \text{ mm / puls}$	$\frac{3000 \text{ ppr}}{300 \text{ mm}} = 10 \text{ pulses / mm}$
Example 2 Measuring wheel circumference = 12" Pulse number encoder = 1200 ppr	$\frac{12 \text{ inch}}{1200 \text{ ppr}} = 0.01 \text{ inch / puls}$	$\frac{1200 \text{ ppr}}{12 \text{ inch}} = 100 \text{ pulses / inch}$

1) Clamping flange 58 mm / shaft ø 10 mm - only relevant for ordering an encoder as a single component.

Measuring wheel system

Performance-Line

Measuring wheel system MWE61

With spring arm, contact force max. 40 N

Technology in detail

Mounting options encoder on spring arm

The encoder is attached to the spring arm with 3 screws.

For a flexible outlet direction of the cable or connector, the encoder can additionally be mounted in 120° steps.

0° (delivery state)

120°

240°

Various mounting options

vertically

overhead

Measuring wheel system

Performance-Line

Measuring wheel system MWE61

With spring arm, contact force max. 40 N

Technology in detail

Setting the preload

1. Mount the measuring wheel system on the application and release screw.
2. Turn the adjustment ring with a thin allen key or screwdriver until the desired preload is reached.
3. As a guide: Internal detent points in 45° steps correspond to approx. 20 N. Hold the position of the adjustment ring and tighten the screw again.

Installation example

Preload approx. 20 N

Preload

Contact force max.

Contact force min.

Contact force of the measuring wheel on the material to be measured

- ① Preload (example): 20 N by turning the setting wheel by approx. 45° - corresponds to a detent point
- ② Contact force
- ③ Spring deflection limitation to protect against overload
