

## Process and Temperature Controllers – Codix 850 / 851

### Your benefit

- multifunctional, i.e. all usual measuring signals can be connected directly (voltage, current, thermocouples, resistance thermometers, resistance)
- flexible limit value monitoring (2 limit values)
- HART® communication socket for setting parameters
- LCD display and keys for on-site operation for model 851
- programmable input characteristic curve with up to 32 control points

### More advantages

- programmable via PC or keys
- integrated measuring transducer power supply
- RS232 interface for parameter setting and measured values output
- analog output with scale factor for current or voltage of the linearised input

### Example: Linearisation of the characteristic curve of a container

Our process controllers linearise the relationship between the fill-up level  $h$  and the volume  $V$  of the container. This can be set exactly thanks to 24 or 32 control points. The devices 850/851 can output the linearised values as current or as voltage values (e.g. 4 ... 20 mA) and thus offer in addition the function of a voltage transformer.

Interface	05 = RS232 serial interface 95 = analogue output and RS232 serial interface *
Supply voltage	0 = 90 ... 253 V AC* D = 18 ... 36 V DC and 20 ... 28 V AC

Please note:  
The combination 0.850.002.X05 is not available.

#### Advice:

The use of the PC-Software with RS 232 connection cable (to be ordered separately) is strictly required for all versions 0.850.XXX.XXX. It is also recommended when using the 0.851.XXX.XXX versions to facilitate the device set up.
