Inputs:

INP A, INP B

Count inputs: the max. count frequency of 10kHz can be damped for each channel to 30 Hz.

Gate

Static gate input; no counting while this input is activated

Reset

Dynamic reset input; it is connected in parallel to the red reset key and sets the counter to zero (adding mode) or to the preset value (subtracting mode)

Key

Static keyboard lock input; while this input is activated, the front keys are locked for operations

Outputs:

2 potential free outputs (903: 1 output), versions with relay or optocoupler available

Programming:

The types 903 and 904 are programmed via only 4 keys on the front side. Trouble-free and intuitive operation through clear text user guidance on the display. The operating parameters are chosen from a menu. The device can be used as:

1. Pulse counter
2. Frequency meter
3. Time meter

Therefore the following functions are programmable:

Polarity of the inputs:

Positive (pnp) or negative (npn) polarity of the inputs. The selected polarity applies to all inputs.

Operating modes, impulse counter and timer:

- adding, starting at zero
- subtracting, starting at the preset value (903) or at preset value 2 (904)
- adding with automatic reset to zero at preset value (903) or preset value 2 (904)
- subtracting with automatic reset to preset value (903) or preset value (904) at zero.

Input modes, impulse counter and frequency meter:

- E1 1 count input, 1 count direction input
- E2 1 Count input up
1 Count input down
- E3 Quadrature input
to connect encoders with 2 signals shifted by 90°

- E4 Quadrature input with pulse doubling
to connect encoders with 2 signals shifted by 90°

Decimal places:

The display is possible with two or three decimal places

Scaling factor:

For optimizing the operation with an encoder a scaling factor of 0.0001 ... 9.9999 may be programmed

Output signal:

Selectable as NO contact or NC contact, positive or negative timed signal (duration 0.01 ... 99.99 s)

Gate time for frequency meter:

Selectable from 0.01 ... 99.99 s

Hour meter:

Timing in h, min or s, with a resolution of 0.001, 0.01, 0.1 or h:min:s

Applications:

control via light barrier

control via encoder
